Subject: Application for an Internship in Cognitive Engineering / UX / Computer Science

Dear Sir or Madam,

I am currently a student in Cognitive Engineering at the École Nationale Supérieure de Cognitique (ENSC), and I am seeking to apply my skills within your organization through an internship related to user-centered design, UX research, and human-technology interaction.

My academic background in cognitive engineering has enabled me to develop a multidisciplinary approach at the intersection of cognitive sciences, psychology, ergonomics, and digital technologies. I have acquired strong foundations in cognition, cognitive psychology, human factors, and usability, which I apply within a user-centered design and UX research perspective.

From a technical standpoint, I possess skills in web development (HTML, CSS), back-end development using C# and Python, as well as database fundamentals, including data modeling and SQL queries. This dual expertise—both human-centered and technical—allows me to collaborate effectively with diverse profiles and contribute to projects that integrate technical constraints with user needs.

I am particularly interested in the challenges related to artificial intelligence and its applications, and I am gradually orienting my academic and professional path toward issues combining technological innovation and user experience. In this context, I actively pursue my academic training and engage in projects aimed at strengthening my analytical, methodological, and technical skills.

Rigorous, curious, and highly motivated, I am able to adapt quickly to new environments and work efficiently within a team. Joining your organization would

represent a valuable opportunity for me to further develop my skills while actively contributing to your projects.

I would be pleased to discuss my motivation and background in greater detail and thank you in advance for your consideration of my application.

Yours faithfully,

Marc-Antoine DAUX
